

Passing the Test from a Testing Laboratory

NORTH BAY/BIOSCIENCE, INC.

North Bay Bioscience is in the business of testing and monitoring sterilization of healthcare products worldwide. Needless to say, accuracy and complete cleanliness are critical. Although much of the company's work is done by highly-trained on-staff professionals, some of the essential roles have also been outsourced to Grand Traverse Industries. GTI arranges for the pickup of used test tubes, the dumping and cleaning of thousands of test tubes, and delivery back to North Bay each day. As many as fifty GTI staff members from two GTI offices are involved in the process – one that has become second nature for North Bay.

Quality Assurance Manager Kim Brackett, whose job it is to assure the highest levels of competency at a company whose role it is to measure cleanliness, gives GTI high praise.

“We are very satisfied with GTI's work. They are very efficient and reliable, and their quality is very, very high.”
